LABELLING MACHINE

STROZA

create to innovate

56700

The labelling station is an automatic module designed for use in a packaging line. Labels are applied to the paper boxes from all four sides with a possibility of sticking the label over the edge of the box. A pair of narrow belt conveyors with independent drive run through the centre of the station. These are mounted on sliding mechanisms and they allow the conveyor to be adjusted to different dimensions of products.

The station is managed by a programmable logic controller and has its own control panel on the electrical switchboard.

HIGHLIGHTS

- › Closing boxes with labels
- › Closing from all four sides, successively from two sides and subsequently from the other two sides
- › Wide variability in adjustment of the dimensions of the boxes to be sealed
- › Control system Siemens Simatic
- › Approximate dimensions: 2 400 × 2 000 × 1 400 mm
